5. Fire fighting measures

Flashpoint (Method): N/A

Flammable Limits: LEL: N/A UEL: N/A

Extinguishing media: CO₂, extinguishing powder or water jet.

Fire fighting equipment: The product must exceed 600°C for an extended period of time, in order to catch fire. Toxic and irritating materials may be released in a fire. Wear self contained breathing apparatus in case dusts are formed during a structural fire.

Hazard connected with the product: ----

6. Accidental release measures

If dust is produced during any use or processing of the product, it should be removed using a wet mop or a vacuum equipped with a HEPA filter.

7. Handling and storage

Handling: No special measures are required.

Storage: Store only in the original container away from acids and bases.

8. Exposure controls/personal protection

General precautions: Observe the rules of good industrial hygiene and the precaution measures which are usually taken in the handling of the composite materials.

Respiratory protection: Respiratory protection may be required if dusts are created and the ingredient exposures exceeds their respective exposure limits. Use of NIOSH approved air purifying respirators is recommended.

Protective equipment: Observe the good rules in the handling of composite materials. Nitrile gloves (type EN 388 - 29 CFR 1910.138) or protective clothing are recommended when handling brake parts, because some persons may be sensitive to partially cured phenolic or cashew resins and develop dermatitis type reaction upon contact with skin.

Eye protection: Wear safety glasses when necessary.

Ventilation: All operations that may generate dust including grinding, machining, and drilling should be sufficiently exhausted to avoid inhalation of dust.
